

It's called the CleverLCD – and it really is! and it's Multi Touch.

Most of us are familiar with Interactive Whiteboards in an Academic or Training environment, but their bulky, and in some cases even too big. Although projectors have come on in leaps and bounds over recent years, they still pop bulbs too often, especially if you don't clean them as often as you should.

Of course, Interactive Overlays have changed this to a certain extent, and they are much better than they were. However, with the CleverLCD Touch everything is built into the housing from scratch.

This increases the accuracy of your finger significantly, even, if like me, you have chubby fingers.

And now it's available as **Multi Touch** (Windows 7 required) which allows even greater flexibility when you doing presentations or training.

Power really is at you're fingertips, and someone else's' at the same time.

Technical bit

The CleverLCD Touch Dual and Dual Plus are a range of large format interactive LCD displays designed for the meeting or training room.

A choice of 4 sizes are available from **42" to 65"**. All screens feature a high definition LCD display protected by a toughened 4mm glass surface. Using optical technology you can interact with the screen using your finger, supplied pen, or anything else to control the content. The unit is fitted with an all metal black bezel to enhance the protection and suitability for the meeting room.

The CleverLCD Touch *Dual Plus* features the same high quality LCD display and also includes a powerful PC, mounted flush to the back of the panel.

For more information on the CleverLCD Touch Dual and Dual Plus, contact your Account Manager, or call 029 2033 3000 to speak to one our AV team.
